

## **Project to collect 1,000 contact emails for hotels, holiday homes, holiday cottages, guest houses, etc**

We have a list of 200+ towns in the UK and we need to collect contact emails for hotels, holiday homes, holiday cottages, guest houses, etc in each of those towns.

Example process:

- Type [accommodation in perranporth, cornwall, uk](#) into Google Maps
- Visit the website for each hotel, holiday home, holiday cottage, etc in the town and then find a contact email (probably from their Contact page)
- Enter the location name, website address, contact email, and contact page into an Excel spreadsheet (see example below)

Important notes:

- We do want contact emails for hotels, holiday homes, holiday cottages, holiday apartment rentals, and self-catering accommodation.
- We don't want contact emails for any locations using booking.com or airbnb.com as their website.
- All contact emails must be unique (some locations will use the same website but we don't want contact emails repeated in the Excel spreadsheet).
- All contact emails must be found on the website. You can't just get a URL (eg. [www.hotel-xyz.com](#)) and then guess the email address (eg. [contact@hotel-xyz.com](#)). It will be easy to check if this happens because our emails will just bounce back.

**This initial project will be for 1,000 emails but there is the opportunity to do many more in a future project if we're happy with the results.**
